Buckeye Shielded Cable:

Buckeye Shielded Cable (Patent Pending) is a flexible, reciprocating, push-pull type cable that can be used for all system inputs and outputs (fusible link line, gas valve line, and remote pull station line) instead of conduit and corner pulleys. The core of the cable is standard 1/16" stainless steel cable. Just attach one end to the control head, run it to its termination point (hood, gas valve, or pull station), and install a few fasteners to assure it stays in place.
